

# BEVZERO

EQUIPMENT SALES & DISTRIBUTION

## For Non-Alcoholic Beverages

## For Non-Alcoholic Beverages

- Implen Spectroscopy for QA/QC
- ClearAlc Dealcoholization
- PolarClad/BevClad Tank Insulation
- VinFoil Tank Mixers

# Building a Facility for NA Beverage Production

As demand for non-alcoholic (NA) beverages continues to grow, producers must rethink traditional winery and beverage facility design. Without alcohol acting as a natural preservative and structural component, NA products are more sensitive to temperature, oxygen, and microbial instability—making process control and precision critical.

Integrating advanced technologies like Vinfoil tank mixers, PolarClad/BevClad tank insulation, ClearAlc dealcoholization systems, and Implen UV-Vis ensures product quality, consistency, and efficiency at every stage of the production process.

- **Precision Mixing (Vinfoil):** Achieve fast, uniform blending of ingredients, functional additives, and aromatics—critical for maintaining consistency in NA formulations. Additionally, to ensure product safety due to absence of alcohol's natural antimicrobial protection, there is a sanitary design available (Sanfoil).
- **Temperature Control & Energy Savings (PolarClad):** Maintain stable tank temperatures to prevent microbial growth and protect delicate flavor profiles, while significantly reducing energy costs. (BevClad Tank Insulation in the EU).
- **High-Quality Alcohol Removal (ClearAlc):** Gently remove alcohol with minimal impact on aroma and structure, preserving the integrity of the final product.
- **Integrated QA/QC Verification (Implen):** Utilize rapid UV-Vis analysis to monitor product ABV, consistency, and ensure quality control from development through final packaging.
- **Microbial Risk Management:** With no alcohol for protection, tight control over processing conditions—mixing, temperature, and handling—is essential to ensure shelf stability and safety.
- **Scalable, Efficient Production:** These technologies work together to streamline operations, reduce processing time, and support consistent, repeatable production as your NA portfolio grows.
